Concrete faced rockfill dams (CFRD) have been widely used for multi-purposes over the world. The construction of CFRD involves placing the higher-grade rock at the dam core, and compacting them to their maximum strength. A reinforced concrete slab is then constructed at the upstream face of the dam.

Dams - RST Instruments

Rock-fill dams are a kind of dam that combines porous yet firmly packed gravel, sand, or silt in one section with an area of concrete, metal, clay, or some other substance that completely blocks water. The section of compacted granular soil helps slow the flow of water while the impervious zone provides strength and stability.
